

Solar System Coloring Book

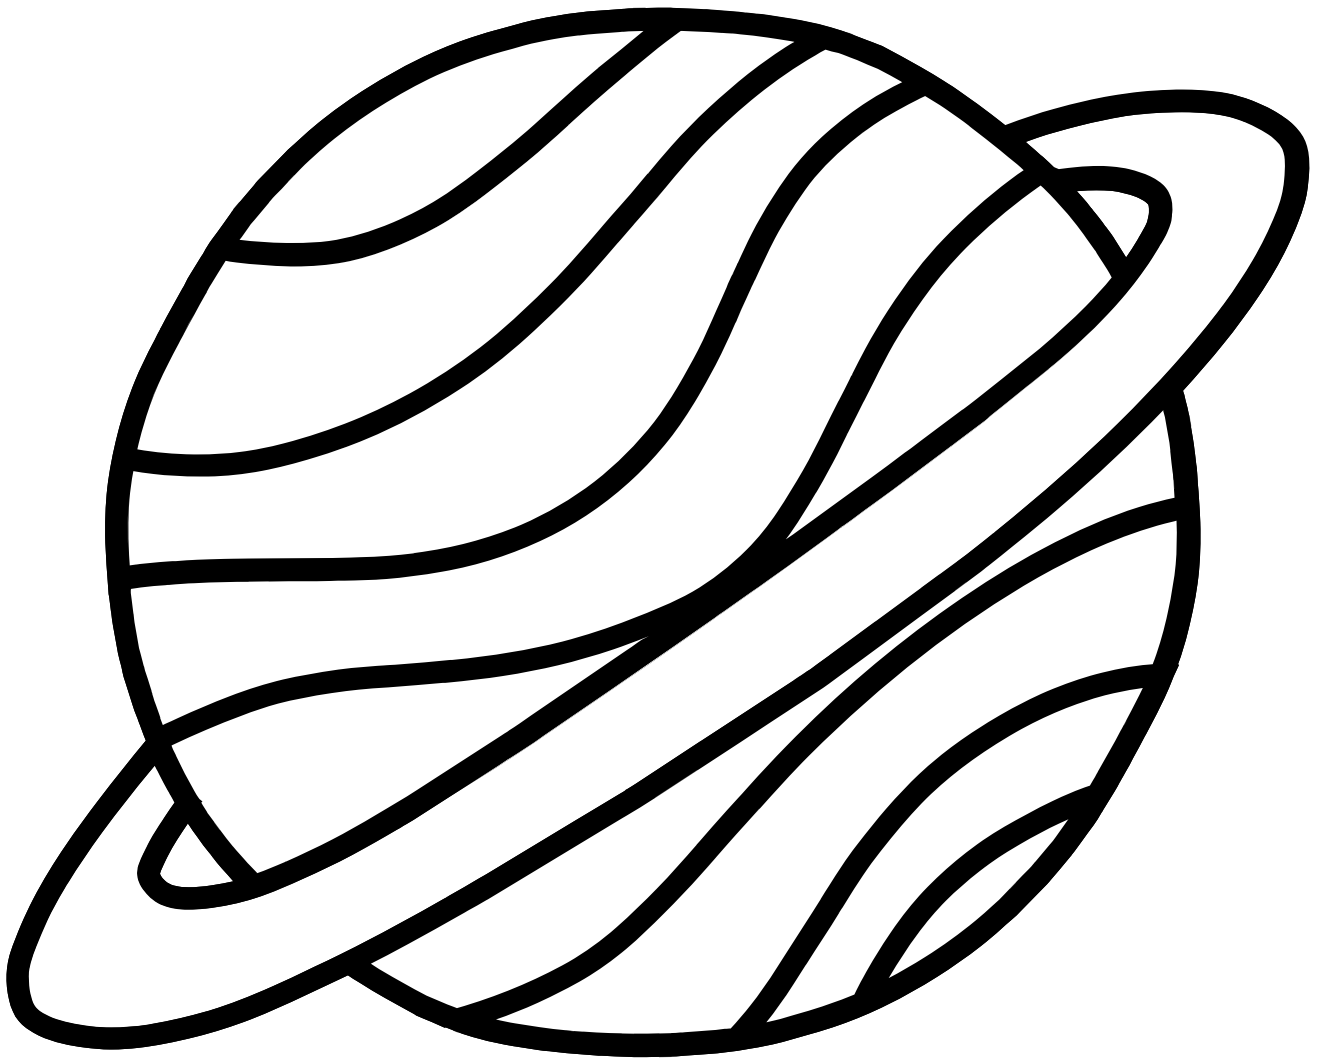

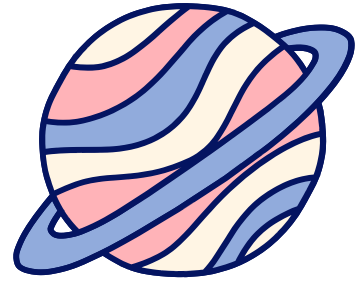

Name: _____

JUPITER

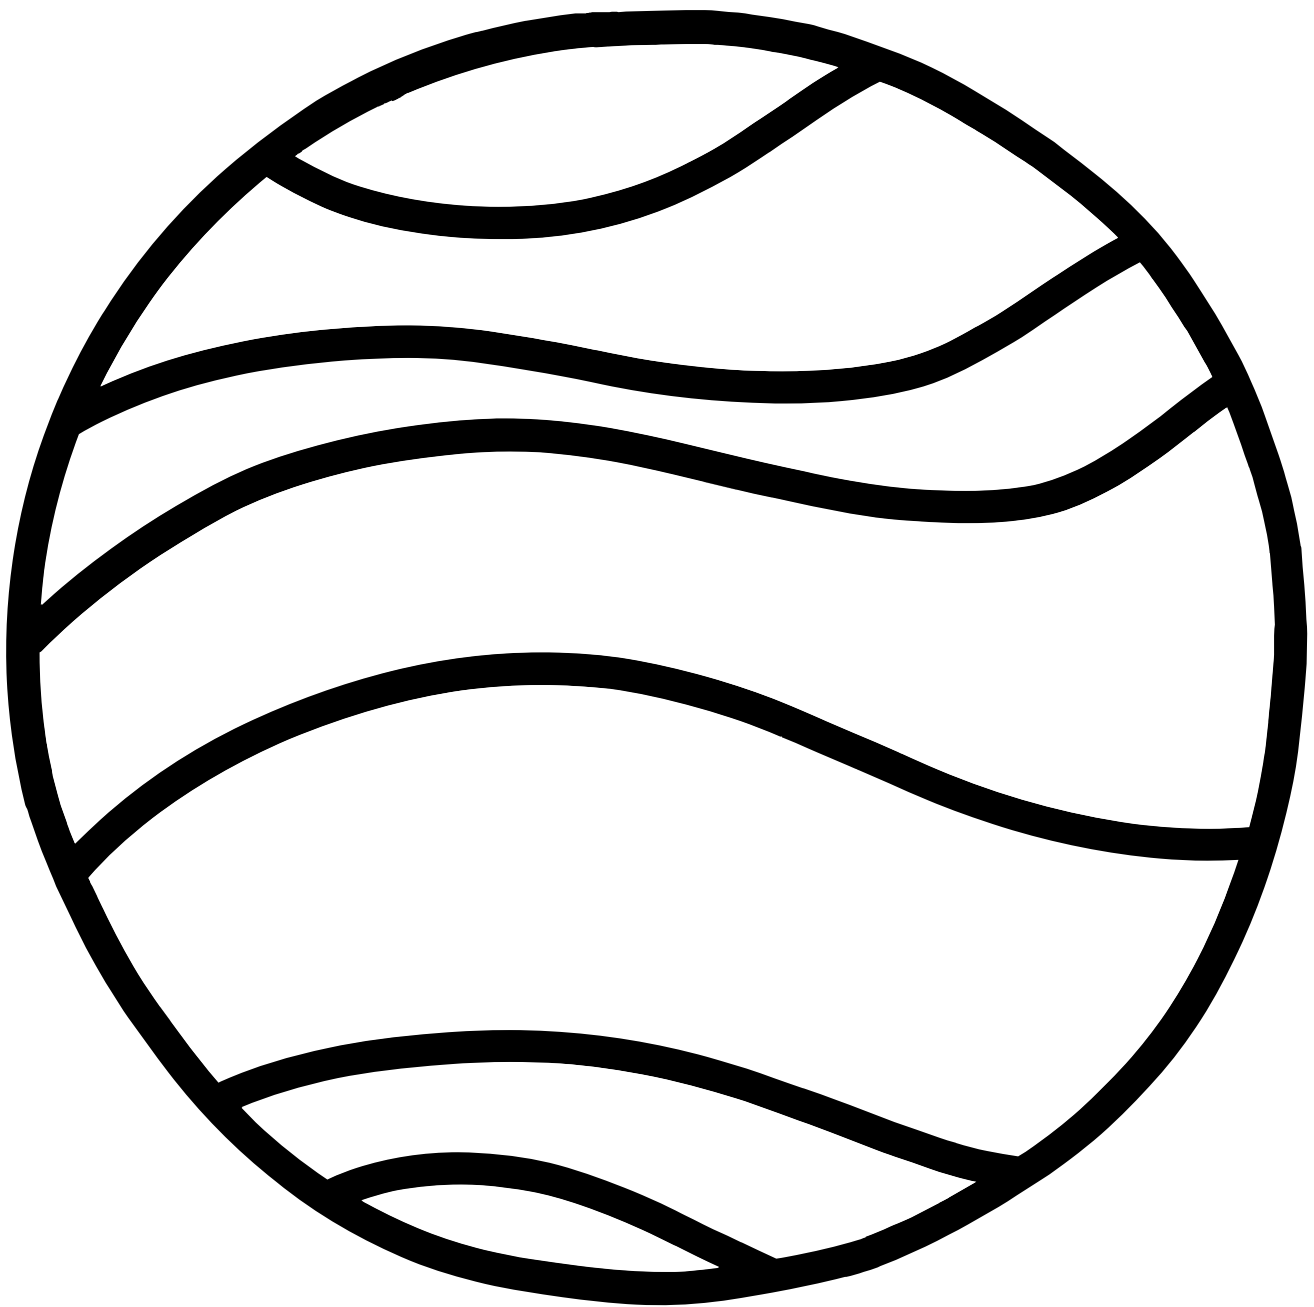

Jupiter is the fifth planet from the sun and called a 'gas giant'. It has 79 moons and is the largest planet in the Solar System. It is as big as 317 Earths!

SATURN

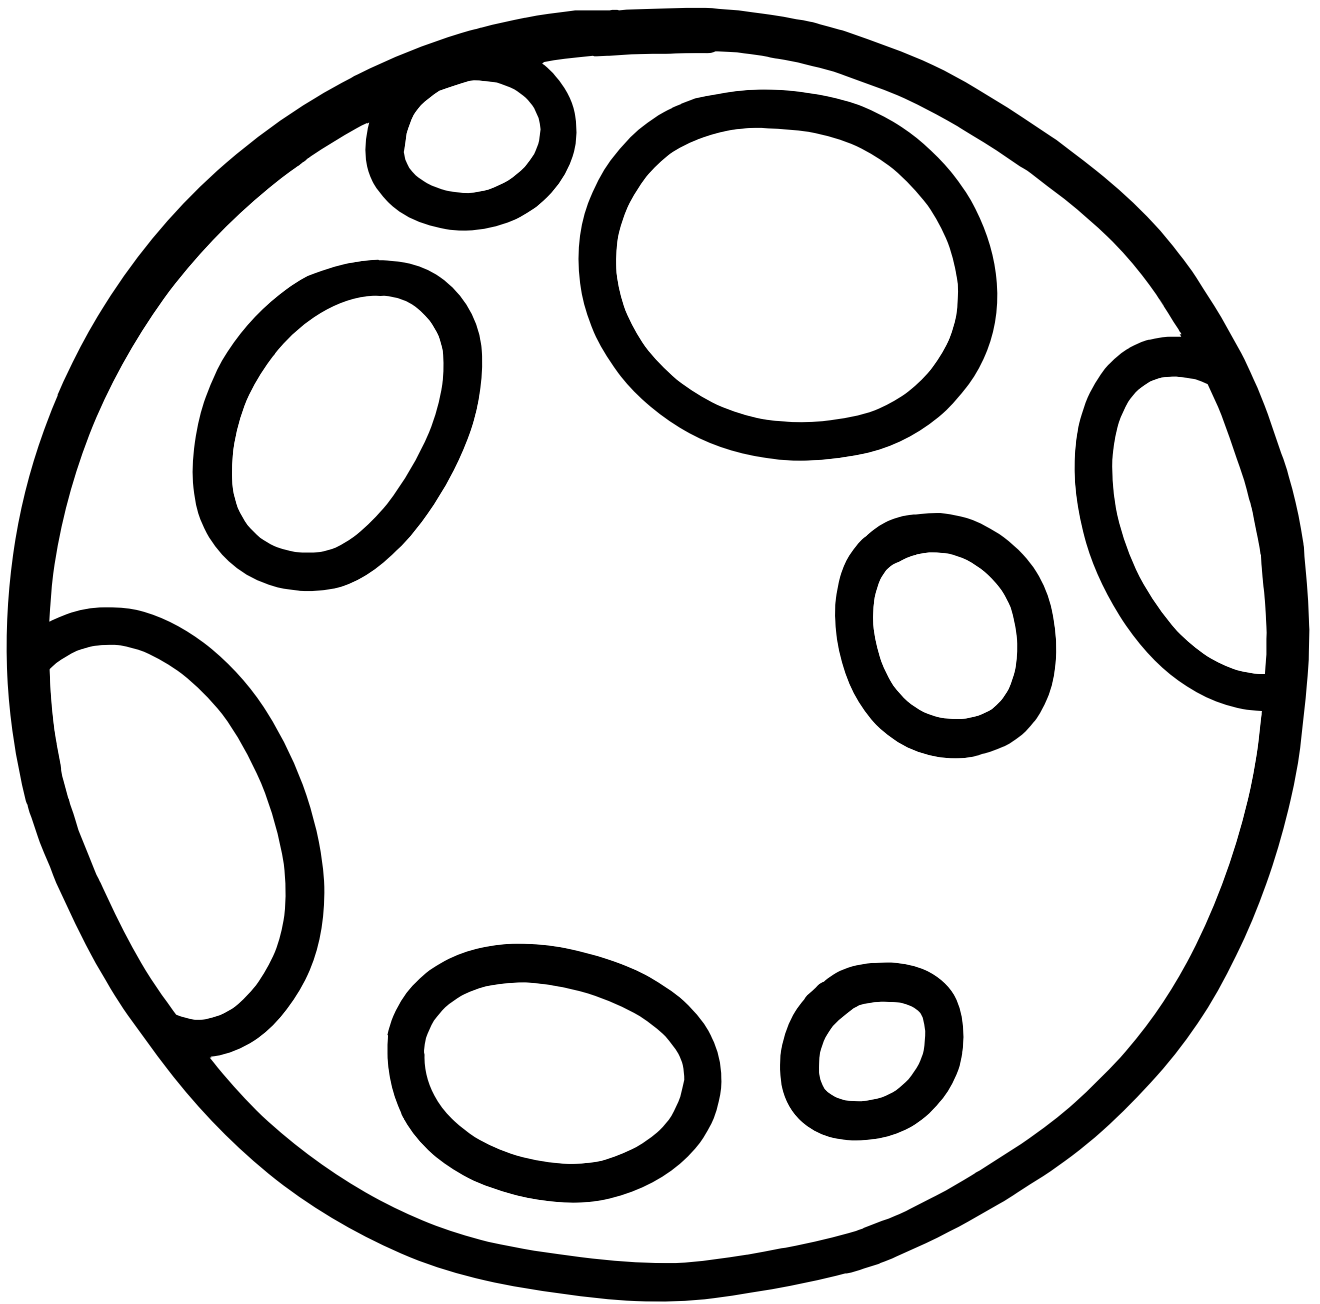

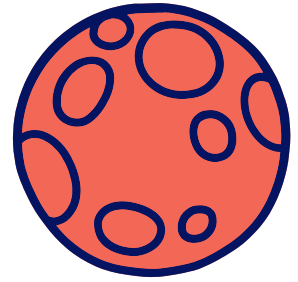

Saturn is the second largest planet in the Solar System and the sixth furthest from the sun. It is called a 'gas giant' and is made up of the same gases as the sun and Jupiter. Saturn has 62 moons. White spots on the planet are actually storms.

VENUS

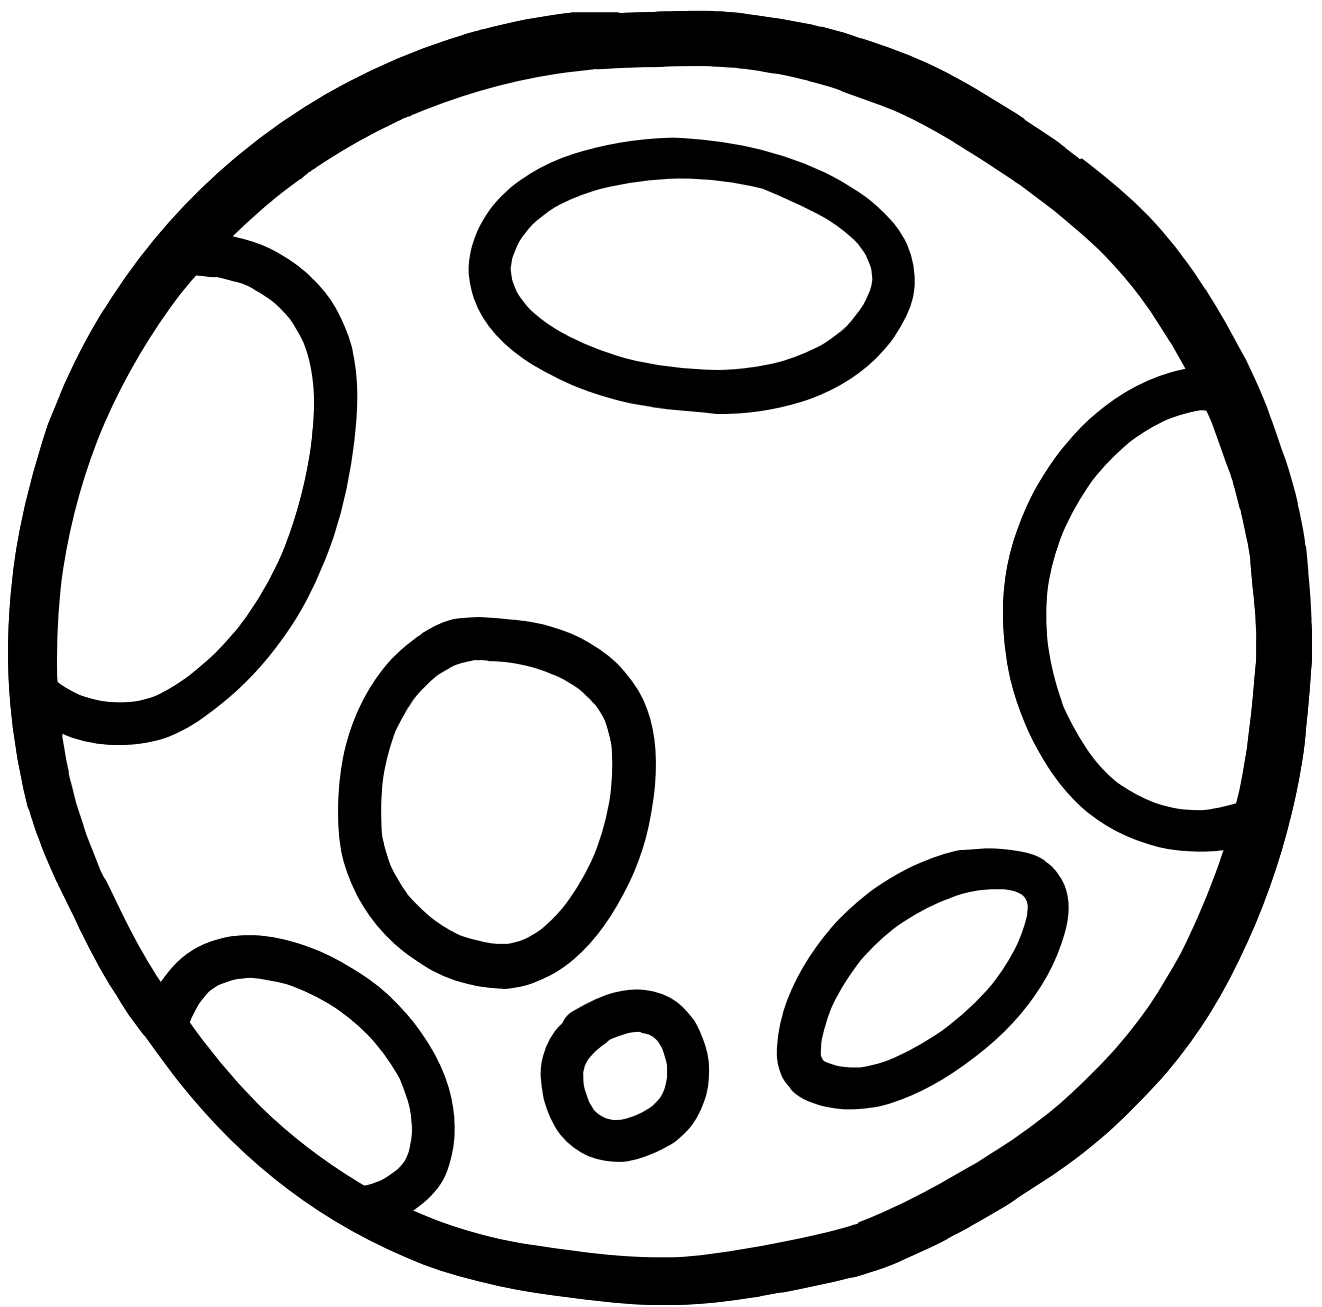

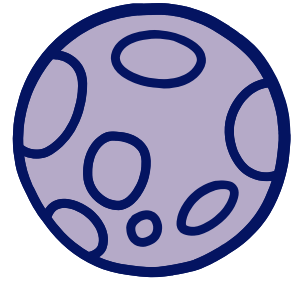

Venus is the second planet from the sun and does not have any moons. It is too hot on Venus to explore and has the most volcanoes in the whole Solar System. Venus is Earth's closest neighbor.

MARS

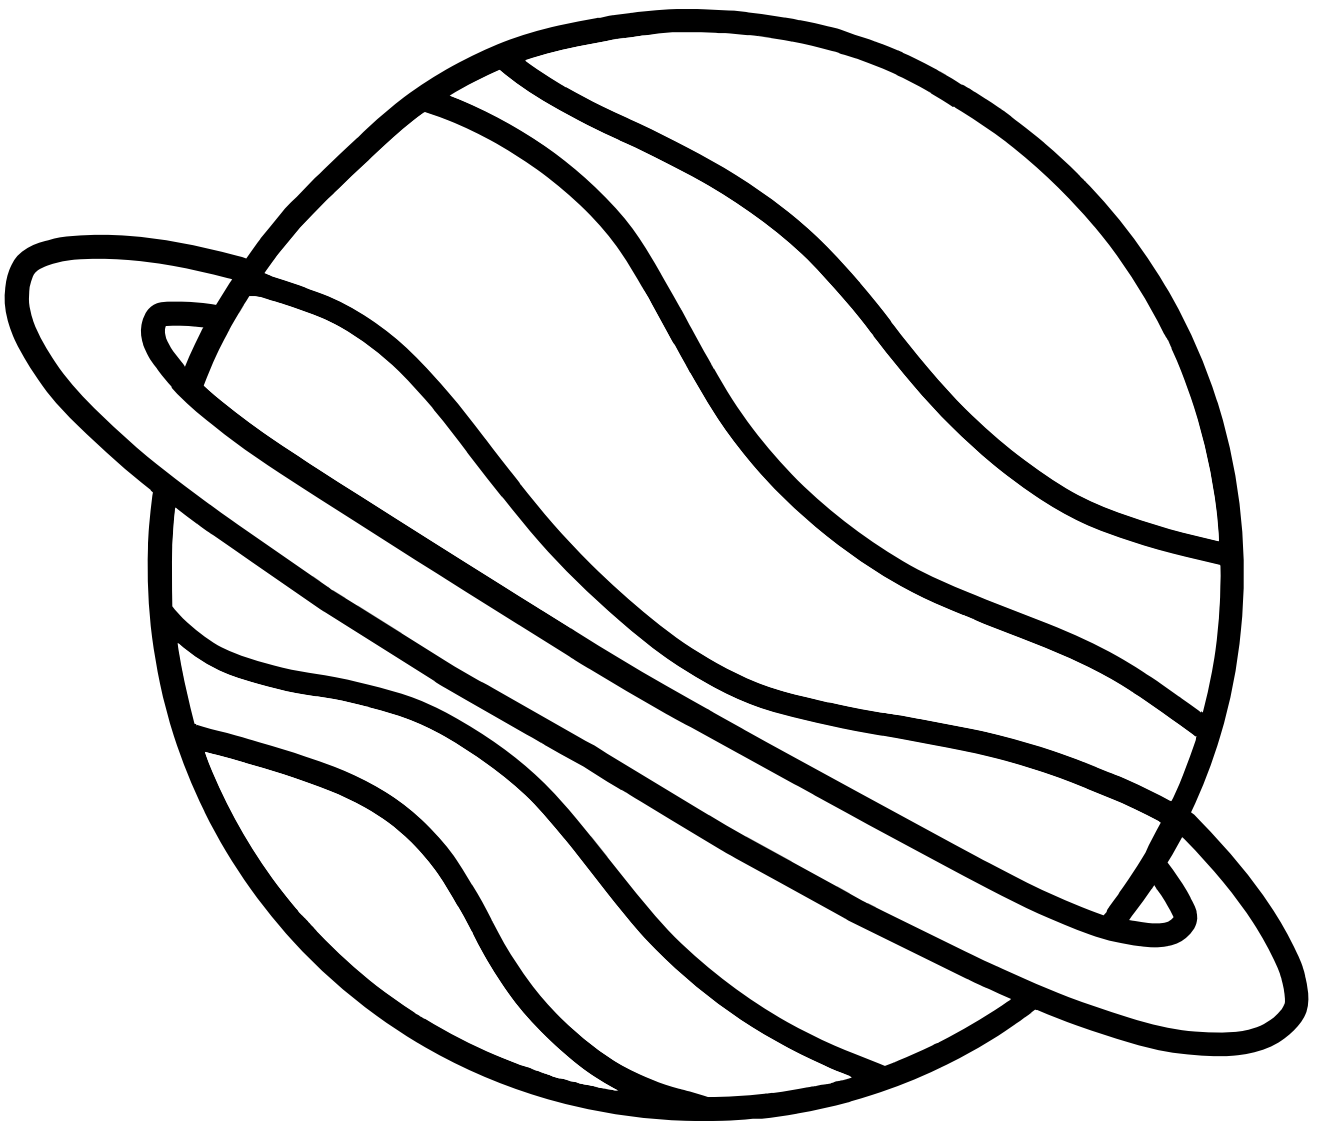

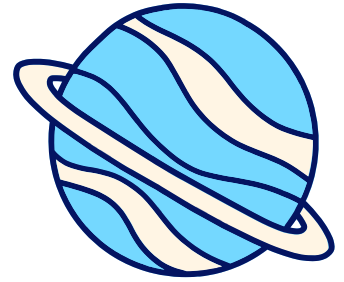

Mars is the fourth planet from the sun. It is the second smallest planet in the Solar System and is half the size of Earth. It has two moons and is red in color due to its iron minerals.

MERCURY

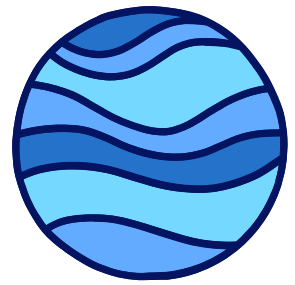

Mercury is the planet closest to the sun and does not have any moons. It has craters on the surface, similar to Earth's moon. It can be both extremely hot and cold on Mercury. It is the smallest planet.

URANUS

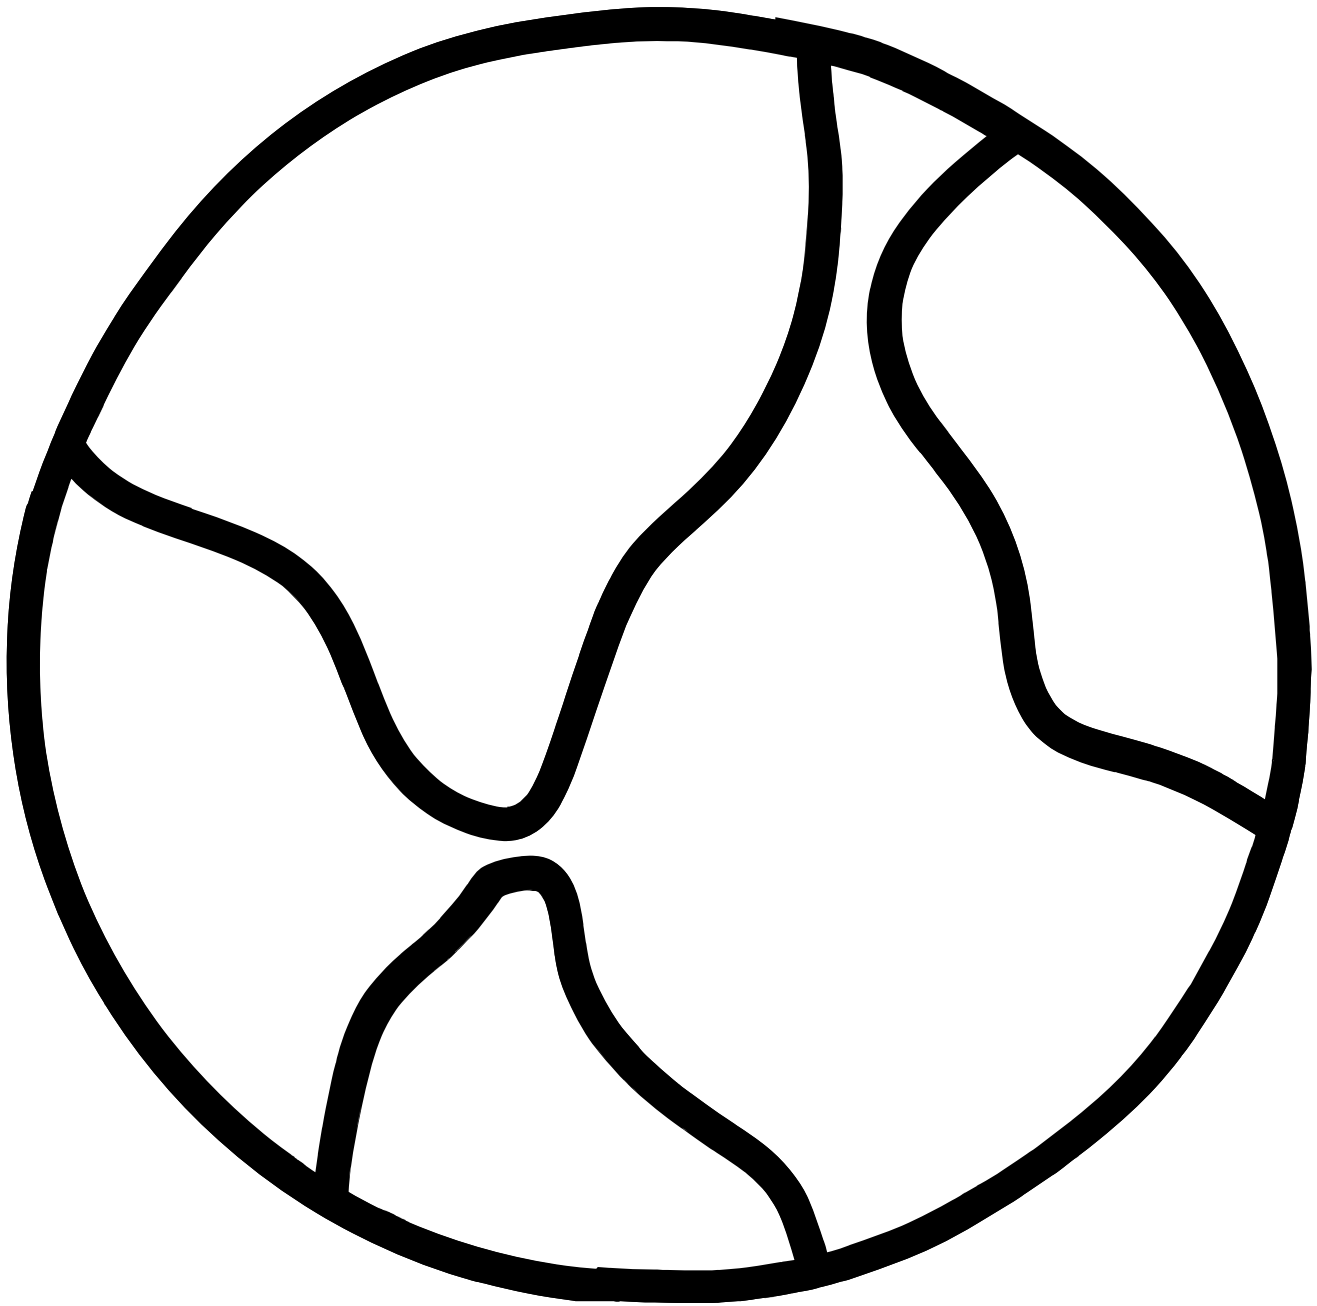

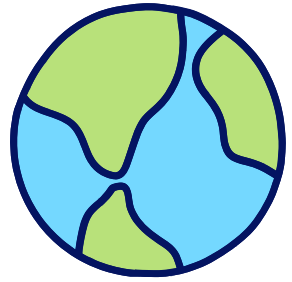

Uranus is the seventh planet from the sun. It is a gas giant within the Solar System and is made up of a lot of ice. Uranus is the coldest of the planets. It has 27 moons and can be seen from Earth.

NEPTUNE

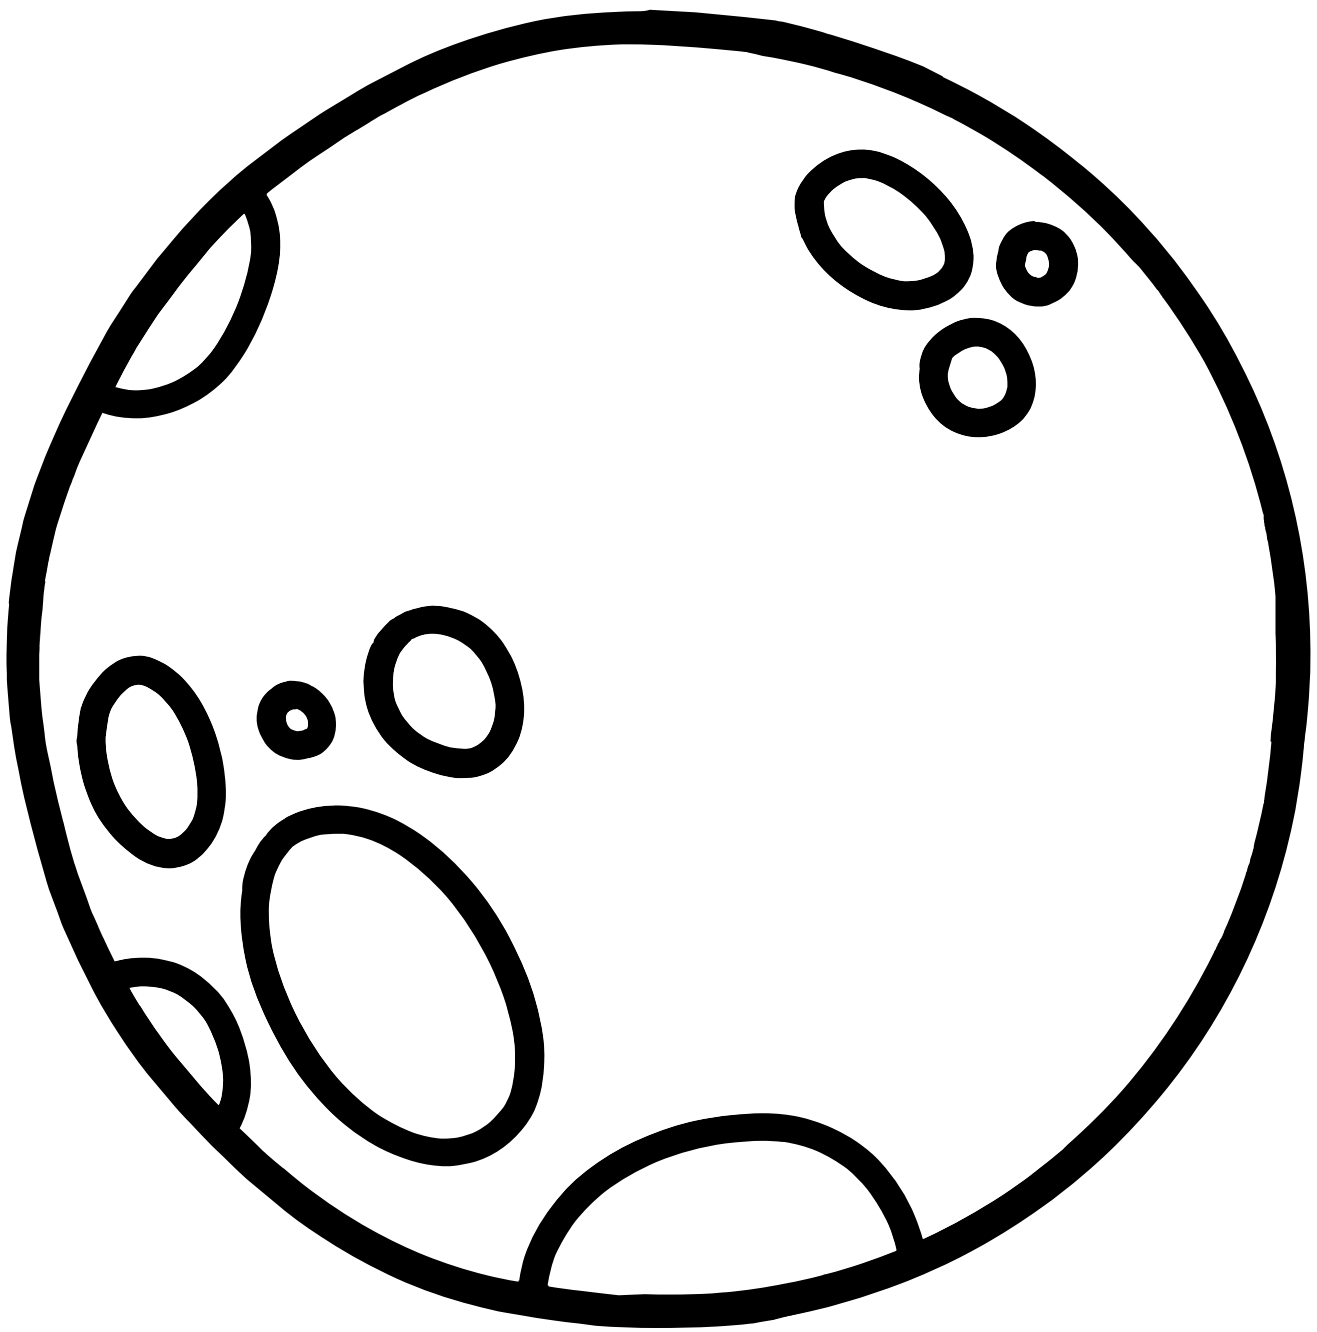

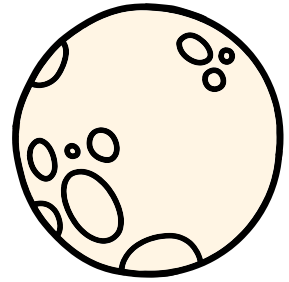

Neptune is the furthest planet from the sun and is called an "ice giant". It does not have a solid surface because it is made up of gases. Neptune has 14 moons and is blue in color.

EARTH

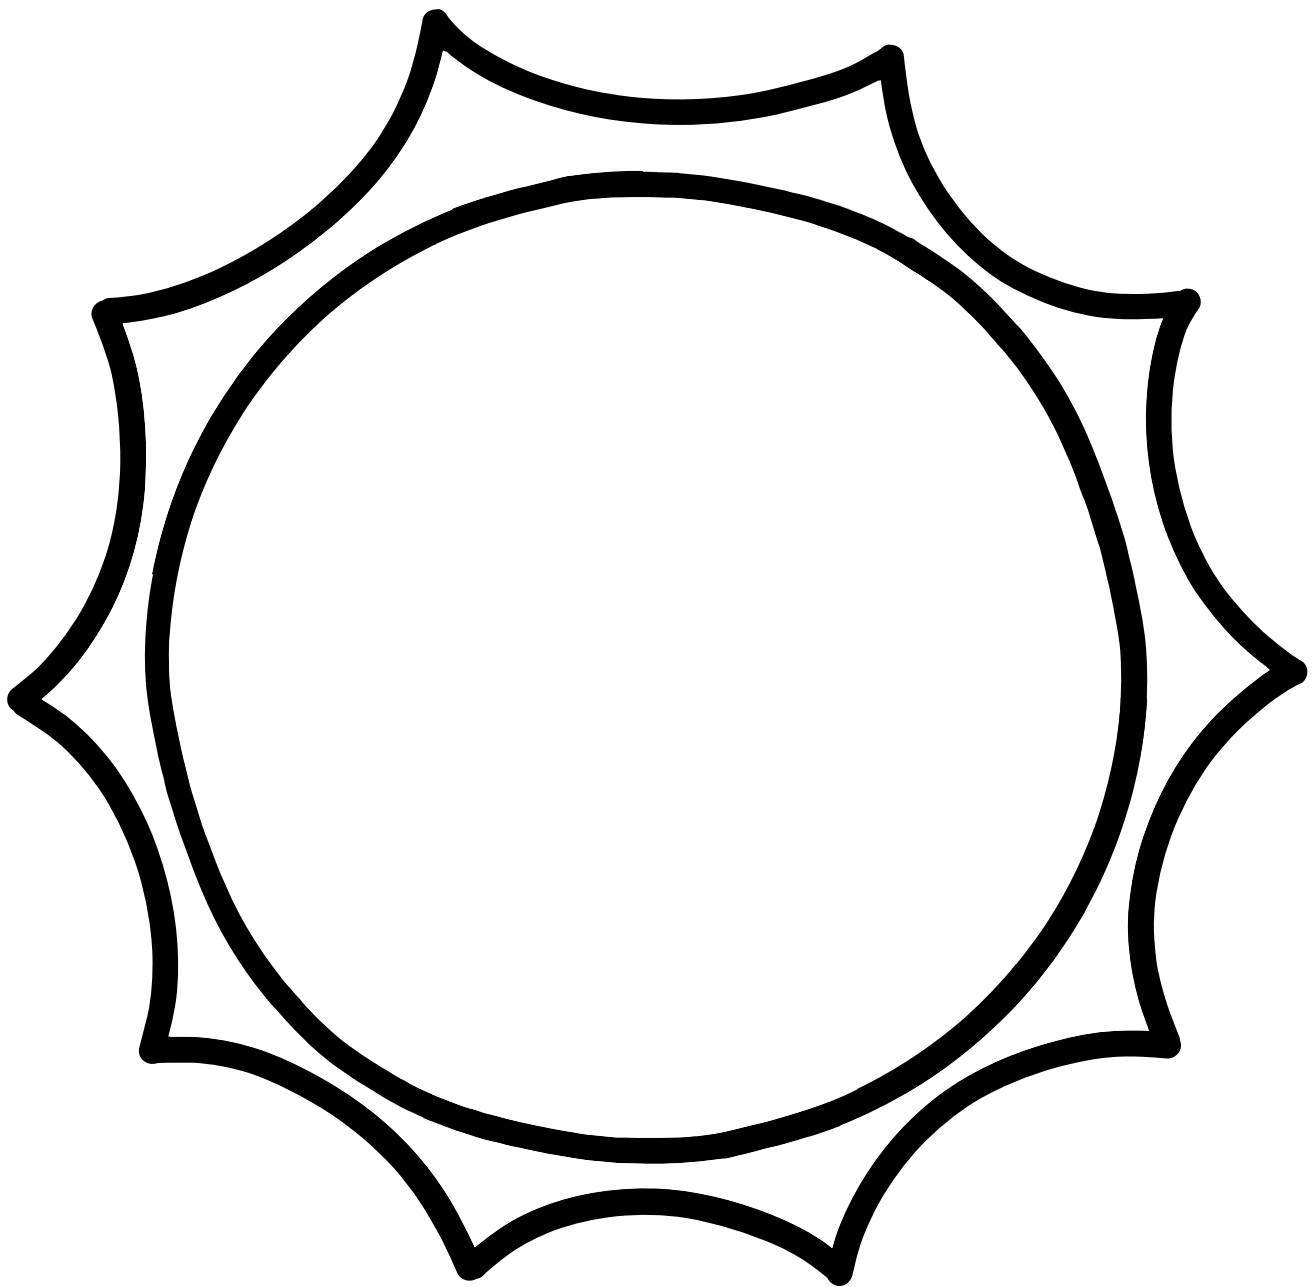

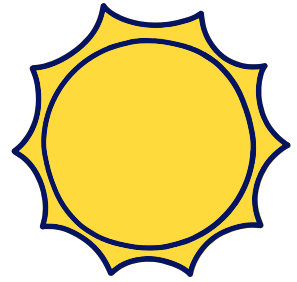

Earth is the third planet from the sun. "Earth" means "the ground". It has only one moon. Earth has water, sun and food meaning that life is sustainable on Earth.

MOON

The moon is over 4.5 billion years old. It has no natural light, but reflects light from the sun. It takes 27 days for the moon to orbit Earth. 12 people have set foot on the moon.

SUN

The sun is a star at the centre of the Solar System. It is made up of burning gases. The sun is the most important life source for all living things on Earth. Eight planets orbit the sun.
